CUSTOMIZED FOR ANY SIZE AND  
ANY SHAPE.***

EXAMPLE 3

A solution to increase the level of security for your delivery vehicle(s). During in-home delivery runs, products would be in the delivery vehicle, unguarded. We've created a Steel Safety Enclosure that could be locked when the driver is away from the vehicle that would also eliminate the ability for someone to look into the cab and see what was inside the back. Additionally we can maximize the amount of storage space available in the delivery vehicle(s). Customized to fit any size vehicle, even your trunk.

Our custom safety cage can be made with solid metal sides and front (**EXAMPLE 1**) to accommodate the dimensions of any cargo area. We use woven wire mesh where possible for security and the ability for light to pass through for visibility.

### **EXAMPLE 2 (Vehicle)**

*Measuring both the cargo area and what would be available to fit the steel cage through the access doors. This would provide the final product to have a maximum capacity through a close fitting safety cage. These measurements called for close tolerances to be maintained throughout the construction phase. TMW created a custom design to fit the Ford Transit Wagon. All of the design criteria was discussed with the client prior to fabrication. Once both parties agreed, TMW completed both the fabrication and installation within two days. This reduced down time for the client and ensured a satisfactory result.*

### **EXAMPLE 3 (Structure)**

*8' 2" wide, 6' 10" high and 4' 4" deep. This enclosure provides significant theft protection through using a 3 gauge steel bar that is interwoven to make a mesh. The bars have a tensile strength of 58,000 psi and a shear modulus of 36,000 psi. The angle is 1 1/2" x 1 1/2" x 3/16" thick A36 hot rolled steel. If desired, the door and front panels can be case hardened for even greater strength at a slightly higher cost. The unit can be manufactured from stainless steel as well which will provide the greatest resistance to corrosion and wear.*

**OUR STRONG BOXES ARE MADE FROM THE STRONGEST STEEL ON THE MARKET INCLUDING T1 ARMOUR PLATE. CALL US FOR A COMPLETE SECURITY ANALYSIS (562) 242-3225**

### **PANELS**

Standard Panels come in 81" to 41" wide and are also available in increments of 1' to 5' wide.

### **MATERIALS**

Made from the strongest and most durable steel on the market today! (See Example 2).

### **STANDARDS**

Our enclosures conform to standards for CFR 1301.72 enclosures and can be made with self closing and locking doors. All panels are secure and flushed to the floor.

### **CUSTOMIZATION**

We can create ANY SIZE OR SHAPE enclosure to meet your need. Enclosures com in a wide range of colors including stainless steel & chrome.
